## Reversing the sequence

You are given a sequence of 64-bit integer numbers. Your task is to write a program that produces the reversed version of the given sequence.

## Implementation details

You should implement one function (method):
o int64[] reverse(int64[] a).

- a: given sequence.
- function should return the reversed sequence.

## Examples

## Example 1

```
reverse([1, 2, 3]).
```

The function returns [3, 2, 1].

## Example 2

```
reverse([-3, 4, 6, -8, 9]).
```

The function returns $[9,-8,6,4,-3]$

## Subtasks

This task has only one subtask costs 100 points, the length of the sequence is at most 100, 000 .

## Sample Grader

The sample grader reads the input in the following format:

- line 1: integer $n$,
- line 2: $n$ integers $a_{i}$.

## Language Notes

Please use the provided template files for details of implementation in your programming language.
